Background:	The predicted AD7CNTP protein contains 375 amino aci ds and has a calculate molecular mass of about 42 kD. It is rich in serine and proline residues, has a 15-amino acid hydrophobic leader sequence, and has 7 putative membrane-spanning regions. AD7CNTP has several phos phorylation sites, a myristoylation site, and 2 serine/thre onine kinase protein domains. Northern blot analysis det ected 1.4- and 0.9-kb transcripts only in adult frontal an d temporal lobe. In vitro studies demonstrated that over expression of AD7CNTP in transfected neuronal cells pro moted neuritic sprouting and cell death, the 2 principal neuroanatomic lesions correlated with dementia in AD.
