技术规格

Background:	This gene encodes a member of the acyl-CoA dehydrogenase family of enzymes that catalyze the dehydrogenation of acyl-CoA derivatives in the metabolism of fatty acids or branch chained amino acids. The encoded protein is a mitochondrial enzyme that functions in catabolism of the branched-chain amino acid valine. Defects in this gene are the cause of isobutyryl-CoA dehydrogenase deficiency.
Applications:	ELISA, IHC
Name of antibody:	ACAD8
Immunogen:	Fusion protein of human ACAD8
Full name:	acyl-CoA dehydrogenase family, member 8
Synonyms :	ARC42; ACAD-8

SwissProt:	Q9UKU7
ELISA Recommended dilution:	1000-2000
IHC positive control:	Human thyroid cancer
IHC Recommend dilution:	15-50
