技术规格

Background:	This gene is a member of the inhibitor of apoptosis (IAP) gene family, which encode negative regulatory proteins that prevent apoptotic cell death. IAP family members usually contain multiple baculovirus IAP repeat (BIR) domains, but this gene encodes proteins with only a single BIR domain. The encoded proteins also lack a C-terminus RING finger domain. Gene expression is high during fetal development and in most tumors, yet low in adult tissues.
Applications:	WB
Name of antibody:	BIRC5(Phospho-Thr117)
Immunogen:	Peptide sequence around phosphorylation site of

	Threonine 117 (K-E-T(p)-N-N) derived from Human Survivin.
Full name:	baculoviral IAP repeat containing 5
Synonyms :	API4; EPR-1
SwissProt:	O15392
WB Predicted band size:	16 kDa
WB Positive control:	Hela cells lysates
WB Recommended dilution:	500-1000
