技术规格

Background:	This gene encodes a protein belonging to the raf/mil family of serine/threonine protein kinases. This protein plays a role in regulating the MAP kinase/ERKs signaling pathway, which affects cell division, differentiation, and secretion. Mutations in this gene are associated with cardiofaciocutaneous syndrome, a disease characterized by heart defects, mental retardation and a distinctive facial appearance.
Applications:	WB, IHC
Name of antibody:	BRAF(Ab-446)
Immunogen:	Synthesized non-phosphopeptide derived from human BRAF around the phosphorylation site of serine 446 (R-D-S(p)-S-D).
Full name:	B-Raf proto-oncogene, serine/threonine kinase

Synonyms :	NS7; BRAF1; RAFB1; B-RAF1
SwissProt:	P15056
IHC positive control:	Human breast carcinoma tissue
IHC Recommend dilution:	50-100
WB Predicted band size:	84 kDa
WB Positive control:	293 cells treated with insulin (0.01U/ml, 15mins) lysate
WB Recommended dilution:	500-3000
