Background:	The protein encoded by this gene is a transketolase that acts as a homodimer and catalyzes the conversion of sedoheptulos e 7-phosphate and D-glyceraldehyde 3-phosphate to D-ribose 5-phosphate and D-xylulose 5-phosphate. This reaction links t he pentose phosphate pathway with the glycolytic pathway. V ariations in this gene may be the cause of Wernicke-Korsakoff syndrome. Three transcript variants encoding different isoform s have been found for this gene.
