Background:	Protein kinase CK2 is a ubiquitous and pleiotropic Ser/Thr prot ein kinase involved in cell growth and transformation. This gen e encodes a protein similar to the E2 ubiquitin conjugating enz yme UBC3/CDC34. Studies suggest that CK2-dependent phosph orylation of this ubiquitin-conjugating enzyme functions by reg ulating beta-TrCP substrate recognition and induces its interacti on with beta-TrCP, enhancing beta-catenin degradation.
