<b>Background:</b>	This gene encodes a member of the WD repeat protein family. WD repeats are minimally conserved regions of a approximately 40 amino acids typically bracketed by gly-his and trp-asn (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Members of this family are involved in a variety of cellular processes, including cell cycle progression, signal transduction, apoptosis, and gene regulation. This protein contains 7 WD r

epeats.
