技术规格

Background:	The protein encoded by this gene belongs to the annexi n family of calcium-dependent phospholipid binding prot eins some of which have been implicated in membrane-r elated events along exocytotic and endocytotic pathways. Annexin 5 is a phospholipase A2 and protein kinase C in hibitory protein with calcium channel activity and a pote ntial role in cellular signal transduction, inflammation, gr owth and differentiation. Annexin 5 has also been descri bed as placental anticoagulant protein I, vascular anticoa gulant-alpha, endonexin II, lipocortin V, placental protein 4 and anchorin CII. The gene spans 29 kb containing 13 exons, and encodes a single transcript of approximately 1.6 kb and a protein product with a molecular weight of about 35 kDa.
