技术规格

Background:	This gene encodes a microsomal beta-glucosidase that c atalyzes the hydrolysis of bile acid 3-O-glucosides as en dogenous compounds. Studies to determine subcellular I ocalization of this protein in the liver indicated that the enzyme was mainly enriched in the microsomal fraction where it appeared to be confined to the endoplasmic re ticulum. This putative transmembrane protein is thought to play a role in carbohydrate transport and metabolism.
