技术规格

Background:	This gene encodes a cytoplasmic protein that catalyzes the transfer of phosphatidylinositol and phosphatidylcholine between membranes. This transfer activity is required for COPI complex-mediated retrograde transport from the Golgi apparatus to the endoplasmic reticulum. Alternative splicing of this gene results in multiple transcript variants.
Applications:	WB
Name of antibody:	PITPNB
Immunogen:	Fusion protein of human PITPNB
Full name:	phosphatidylinositol transfer protein beta
Synonyms:	VIB1B; PtdInsTP; PI-TP-beta
SwissProt:	P48739

WB Predicted band size:	32 KD
WB Positive control:	Jurkat, A431, Raji, HepG2, Hela and PC12 cell lysates
WB Recommended dilution:	500-2000
