Background:	The protein encoded by this gene binds beta-tubulin and increases the stability of microtubules. The encoded protein can also translocate to the cell membrane and bind phosphatidylinositol 3,4,5-trisphosphate (PtdInsP3) and inositol 1,3,4,5-tetrakisphosphate (In

sP4). In addition, this protein is a GTPase-activating protein for A DP ribosylation factor 6 and may be able to block the entry of some RNA viruses.
