| Background: | The protein encoded by this gene belongs to the ARG-specific AD P-ribosyltransferase family. Proteins in this family regulate the func tion of target proteins by attaching ADP-ribose to specific amino acid residues in their target proteins. The mouse homolog lacks a glycosylphosphatidylinositol-anchor signal sequence and is predicte d to be a secretory enzyme. Transcript variants with different 5' U TRs, but encoding the same protein have been found for this gen e. |
