Full length fusion protein

技术规格:

Background:	Synaptobrevins/VAMPs, syntaxins, and the 25-kD synaptosomal-associ ated protein SNAP25 are the main components of a protein complex involved in the docking and/or fusion of synaptic vesicles with the p resynaptic membrane. The protein encoded by this gene is a membe r of the vesicle-associated membrane protein (VAMP)/synaptobrevin f amily. This protein may play a role in trans-Golgi network-to-endoso me transport.
