## 技术规格

Background:	Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix i n normal physiological processes, such as embryonic d evelopment, reproduction, and tissue remodeling, as w ell as in disease processes, such as arthritis and metas tasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular prot einases. The encoded protein activates MMP2 by cleav age. This gene was once referred to as MT-MMP2, bu t was renamed as MT-MMP3 or MMP16.
Applications:	ELISA, IHC
Name of antibody:	MMP16
Immunogen:	Fusion protein of human MMP16
Full name:	matrix metallopeptidase 16 (membrane-inserted)
