技术规格

Background:	Sterol-C4-mehtyl oxidase-like protein was isolated based on its similarity to the yeast ERG25 protein. It contains a set of putative metal binding motifs with similarity to that seen in a family of membrane desaturases-hydroxyl ases. The protein is localized to the endoplasmic reticulu m membrane and is believed to function in cholesterol biosynthesis. Alternatively spliced transcript variants enco ding distinct isoforms have been found for this gene.
Applications:	ELISA, IHC
