技术规格

Background:	Epoxide hydrolase is a critical biotransformation enzyme that converts epoxides from the degradation of aromatic compounds to trans-dihydrodiols which can be conjugated and excreted from the body. Epoxide hydrolase functions in both the activation and detoxification of exogenous chemicals such as polycyclic aromatic hydrocarbons. Mutations in this gene cause preeclampsia, epoxide hydrolase deficiency or increased epoxide hydrolase activity.
Applications:	ELISA, IHC
Name of antibody:	EPHX1
Immunogen:	Fusion protein of human EPHX1

Full name:	Epoxide hydrolase 1
Synonyms :	EPHX
SwissProt:	P07099
ELISA Recommended dilution:	500-2000
IHC positive control:	Human liver cancer
IHC Recommend dilution:	10-25
