Background:	This gene encodes a member of the WD repeat protein family. WD r epeats are minimally conserved regions of approximately 40 amino a cids typically bracketed by gly-his and trp-asp (GH-WD), which may f acilitate formation of heterotrimeric or multiprotein complexes. The e ncoded protein interacts with serine/threonine kinase 11, and is impli cated in cell growth arrest. Alternative splicing results in multiple tra nscript variants encoding different isoforms.
