## 技术规格

<b>Background:</b>	This gene encodes the coiled-coil containing protein optineurin. Optineurin may play a role in normal-tension glaucoma and adult-onset primary open angle glaucoma. Optineurin interacts with adenovirus E3-14.7K protein and may utilize tumor necrosis factor-alpha or Fas-ligand pathways to mediate apoptosis, inflammation or vasoconstriction. Optineurin may also function in cellular morphogenesis and membrane trafficking, vesicle trafficking, and transcription activation through its interactions with the RAB8, huntingtin, and transcription factor IIIA proteins.
<b>Applications:</b>	ELISA, IHC
<b>Name of antibody:</b>	OPTN
<b>Immunogen:</b>	Fusion protein of human OPTN
<b>Full name:</b>	optineurin
