Background:	This gene encodes an endoplasmic reticulum membrane oxidoreductase with an FAD-binding domain and a flavod oxin-like domain. The protein binds two cofactors, FAD a nd FMN, which allow it to donate electrons directly from NADPH to all microsomal P450 enzymes. Mutations in thi s gene have been associated with various diseases, includ ing apparent combined P450C17 and P450C21 deficiency, amenorrhea and disordered steroidogenesis, congenital a drenal hyperplasia and Antley-Bixler syndrome.
